Presents

## Colony

**Colony**, from Derek Koselo, is a game of the Gods. It is *SIM City* for the SAM range of computers. Never has a game of this quality and depth been seen on the SAM - until now.

As the 'one', you will decide where to build your domain. You must build a power source, staff it, mine for ore to pay your workers and pay for new buildings.

Control is from keyboard or SAM Mouse.

Once loaded, you will be in your own world, quite literally. A world where whatever *you* want to do goes. You are the one in control - at least until all of your Colonists die through starvation or drought. Or you could even be ravaged by Earthquakes.

Coupled with stunning graphics and a choice of atmospheric tunes to help you along your way, **Colony** has to be the best game of 1997. It has to be seen to be believed, and at £15.00 (including UK postage and packing) for INDUG/FRED subscribers, you might just save the world.

COLONY IS AVAILABLE NOW FROM FRED.

Orders to: **FRED Publishing**  
5 Ivanhoe Drive  
Westfields  
Ashby de la Zouch  
Leicestershire

# NEWS ON 4

## NSSS DATE CHANGE

The date of the next Wetherby show, which had been announced as the 21st February, has been changed to the 28th Feb. The venue has also been changed from the Methodist Hall to the St. James Church Halls, in near by Church Street.

For the latest information contact George Boyle, the show organizer, on 01937 583827 (after 6pm).

## NEW ADVENTURE

Adventure enthusiast on the SAM will remember the name Robyn Campbell from New Zealand. Her first adventure, *Wonderland*, was launched a couple of years ago by F9 Software, the non-PD software label run by Derek Morgan of SAM PD fame.

Well, now there is a new text and graphic adventure from Robyn. Called *Murder Most Foul* it features graphics by Ken Gager (a fellow kiwi) and Phil Glover from Britain. Music is by Bob Brunsten.

*Murder Most Foul* is not a fantasy adventure like so many, no pointless mazes to solve or magic spell to think up here. Instead *Murder Most Foul* is a whodunnit in a style not a thousand miles removed from Agatha Christie, with you as the private detective out to solve the murder (Now I wonder if the butler did it?? I must say I always think a butler called Alfred just has to be the prime suspect).

Like any good gumshoe, you need to talk to people, explore the house, examine objects and generally poke your nose into everything until you solve the crime. I think most people will find this a refreshing change from the more typical

adventures.

*Murder Most Foul* is available now, and it only costs £5. For further details send a SAE to F9 Software, 18 Mill Lane, Skelmersdale, Lancashire, WN8 8RH.

## THE SOUND JUST GOES ON GETTING BETTER FOR SAM

Quazar have announced another upgrade to their ADPCM play-back software for the *Surround Sound* expansion system for SAM.

The new software includes a feature called 'oversampling' which is a technique mainly used in CD players to improve sound quality. What it does is to calculate what values *should* be in between the sample values and thereby produce a smoother waveform. All these calculations take place in real-time during play-back so there is no increase in the storage needed for a sample.

Colin Piggot, owner of Quazar, has also sent a copy of his latest catalogue which is full of screen-shots and details of his ever growing range of products. To get your copy send a 9x6½" (C5) stamped address envelope to the address below.

Quazar can be contacted at 204, Lamond Drive, St. Andrews, Fife, KY16 8RR. Tel: 01334 475546.

## YOUR NEWS HERE...

Come on readers, we need your news. Anything related to computers which you think will interest other SAM and Spectrum owners. Just jot it down on a piece of paper, add your name and membership number, and send it off to us at the usual address. Please mark the envelope 'News' so that we can give it the priority it deserves.

Remember, you get three months extra subscription for every news item we print, so don't rely on others to send in an item you have seen - send it off yourself and earn our thanks as well.

This months credits:-

# The Editor Speaks

It seems that every time I'm on route to catch up with issues, something goes and puts me back. A laser printer that will not fuse the toner to the paper is no good for producing *FORMAT*, or so I've found out. Weeks of waiting for Mr Fixer to do his job has put me right back where I was at the start of the year - *weeks behind*. So, working with a borrowed ink-jet (thanks Trev, a life saver yet again) I'm just glad that January's issue is always a small one because the changes I've had to make to some pre-prepared articles take a lot of time.

By the way, the printer, an Epson Color Stylus 600, very nice, I have not tried it fully yet on the Spectrum or SAM, but I will report back as soon as I have time to play.

Right, now the good news. Thanks to the very valiant efforts, and considerable amount of time, head scratching and cursing of chip designers, put in by Nev Young over the past six weeks, the first SAM\_Clocks are now undergoing soak-testing and should ship in a few weeks. Hopefully by the time of the April show we will be completely up to date on orders. Any delay now is going to be purely down to time, as I've been lumbered with building the first batches myself.

The story of what went wrong would fill several pages so I will not bore you with the details here. Suffice it to say that if we actually costed these interfaces out on the basis of time spent - you would need to win the lottery to buy one!

Next, the news most of you will be waiting for, the dates for the 1998 Gloucester shows. The Spring show will be held, at the usual venue, on Saturday the 4th April, earlier this year to avoid the Easter holiday period. The Autumn show is set for Saturday 17th October.

We have had several people ringing up already asking for the dates, and a couple have asked why we don't hold them on Sundays instead of Saturdays. Well, when we first started the shows we wanted to make them 'days out' for all the family - but realized that few wives/girlfriends would want to spend much time at a computer show for enthusiasts (yes, I know that is a sexist thing to say, I'm sorry, but it is true). So, we thought Saturday was best as Gloucester's fine range of shops, museums and places of interest would be open. However, that was before the powers-that-be decided to make poor shop-workers slave an extra day each week by making Sunday a normal trading day.

That then poses the question - what would you, the people who we put on the shows for, prefer? Saturday or Sunday? The Spring show may be fixed, but it is not too late to change days for the Autumn one - if that is what people want. Write and let us know your feelings.

And finally, due to the date change of the Wetherby show (see News) I will not be able to make it North this time.

Until next month.

Bob Brenchley, Editor.

## SAM GAMES AVAILABLE FROM REVELATION

### SOPHISTRY

One of the BEST licenced games on SAM. Originally produced for the Spectrum by CRL, and now brilliantly converted for SAM, Sophistry is a game that is big, perplexing, colourful, frustrating, musical, bouncy, and above all DIFFERENT (and it even has the Spectrum version built in so you can take a trip down memory lane).

£9-95 (£8-95 to INDUG members)

### TNT

Written by industry mega-star Matt Round - A game packed with humour, colour, sound and above all ACTION!

Loosely based on Bomb Jack (the game SAM owners have most requested over the years). As well as the normal one player game, TNT has gone one better by giving you TWO player action - competing against each other, in full glorious technicolour - at the same time. It even has a novel feature in a SAM game - a High Score Table, how many others have that?

Avoid the meanies, collect the bonus points, Jump, Hover, Fly - what more do you want???

£9-95 (£8-95 to INDUG members)

### ELITE

The legendary game at last available on SAM disc. Using the code of the Spectrum version, long thought the best after the original BBC version, this game is a must for everyone who loves action and adventure. Full manuals, story book and packaging.

£14-95 (£11-95 to INDUG members)

### GRUBBING FOR GOLD

GRUBBING FOR GOLD - the most advanced, the most playable, the most enjoyable quiz game since the legendary Quiz Ball. They said it could not be done - they said bringing a TV quiz show to SAM would not work. Well let them eat their hearts out because YOU GOT IT...

Hundreds of questions, on a wide variety of subjects at levels to suit most people, it includes a question editor so you can create your own sets of questions. This is the game you can never grow out of.

£9-95 (£8-95 to INDUG members)

### More Games Coming Soon

Send SAE for full list of available games.

## REVELATION FOR THE VERY BEST IN SERIOUS SOFTWARE

>THE SECRETARY (Version 1.5) - The most advanced and the most widely used word-processor for SAM, powerful, versatile and easy to use. £14.95 (INDUG £12.95)

>COMET Z80 ASSEMBLER - The SAM assembler many professionals use, yet easy enough for the beginner - so why settle for second best? New LOW Price £14.95 (INDUG £12.95)

## DRIVER

The Graphical User Interface for SAM

DRIVER works with the SAM Mouse (no mouse should be without one) or Keyboard. It provides a full WIMP (Windows, Icons, Menus, Pointers) system that puts you in full control of your SAM.

Comes complete with many built-in utilities and ready to run applications. Full manual and a disc-based tutorial. DRIVER gives you the ease of use only found on big office computers before. So easy to use yet so powerful. *Fantastic Value £29.95 (INDUG members £24.95)*

Now includes FREE Copy Of DRIVER's Extras Disc 1

DRIVER's Extras Disc still available for existing users at £5.95 (INDUG members £4.95)

SCADs PD Yes, at last, we are pleased to re-release SCADs - the arcade game development system for SAM. Previously sold by Glenco at £24.95 we have now placed the software into the Public Domain so the disc costs you *Only £2.50*. The full manual (over 200 pages) is also available for £12.95 (overseas please add an extra £1 to postage rates below because of weight)

\* All prices include UK postage and packing (Europe please add £1, other overseas please add £2)

\* Payment by UK cheque (made payable to Revelation Software), PO or cash. Sorry but we can't accept Euro-cheque or Giro.

Please Quote INDUG membership number clearly on order if claiming discount.

Send orders to:

**Revelation  
Software**

Revelation Software, 45, Buddle Lane, Exeter, EX4 1JS.

# SHORT SPOT

## YOUR HINTS, TIPS AND PROGRAMMING IDEAS

Edited By:- John Wase.

A New Year, a new start, a new resolution. Send John Wase some more stuff: a little has gone AWOL; the rest has been used. Quick, or we won't have any Short Spot next month.

Let's start with Ettrick Thomson, well known to many of us and a constant contributor (bless you, Ettrick). I've a letter with a SAM program; 'biomorph'. This program is based on 'biomorphs' by J. Murciano. The Concise Oxford dictionary defines biomorph as a "decorative form representing a living object". Decorative forms are certainly produced, but it will need some imagination to see living objects. The precise form depends on the expressions for the variables  $i$  and  $r$  in lines 150 and 160. In the listing here, these lines show the expressions for Biomorph 2, but the program also allows three other expressions: those for biomorphs 3, 4 and 5, and these can be substituted. And other expressions could be thought of.

The 'maximum range', one of the parameters to be input, can be anything up to 10, but the following ranges are recommended: Biomorph 2: 1.6; 3: 2.25; 4: 1.8; 5: 1.7. Recommendations for the other parameter, 'constant', are Biomorph 2: 0.6; 3: 0.7; 4: 0.8; 5: 0.8. But try other values for constant; they can make quite a difference. Running time is about 25 minutes.

Biomorph  $n$  has  $n$  lobes and each of these lobes is a miniature version of the whole display, with  $n$  sublobes; and each of these sublobes is.....well; it would be if SAM's resolution were better.

Biomorph 2, with constant = 1 shows this fairly well.

Here's Biomorph: try it!

```

Ettrick also mentions that intruding R has managed to appear again; INPUT R#2. . . The R, remarks Ettrick, should be deleted. We had this trouble recently, starting off with Simon Turk's 'Wordsearch' program, (August 1996), but we didn't find an explanation. Somewhere or other there was a suggestion that the R crept in during the editing process. Has Bob any ideas? Well, Ettrick, it doesn't, in fact, appear in the editing process, but in the translation process as programs are transferred first from the Spectrum to SAM, and then, in turn, from the SAM to the IBM compatible PC. And, dammitt, it's an intermittent fault, so when you're trying to find it, nothing happens, but when you're not, it creeps in. We're still looking, but we hope any that crept into this issue have been, as it were, Jennied out! Many thanks, Ettrick.

It has been pointed out to me (by, I think, Roy Burford) that a major omission in my list of contributors has been Miles Kinloch of Edinburgh. I *knew* I'd get into trouble if I put in a list. However, to put the record straight, here's to Miles, and yet another piece of information from him. Miles writes that he's sorry that it's been so long, getting in touch, but his spare time has been limited, as he's been in college. However, here are a couple of snippets that might interest our readers.

When experimenting recently with the Betados facility to create extended directory formats, Miles discovered that things go wrong when the file capacity specified exceeds 255, affecting the catalogue display, and the file position referencing. Miles has traced the cause to the fact that the DOS uses a single-byte system variable (at location 15874) for

the directory slot number, which although adequate for the 80 file format, for which it was designed, can only cope with a maximum possible value of 255. Since to substitute a two-byte system variable would involve extensive reprogramming of the DOS, and since a practical limit of 240 files (the nearest value corresponding to a complete set of directory tracks) still offers a generous capacity, the easiest way may be just to accept these constraints and POKE the DOS to restrict the range of the FORMAT parameter.

To recap, the maximum number of directory tracks is currently 39, representing 780 files. A disc would be formatted in this way using FORMAT d1,n where n is the number of directory tracks in the format, in this case 39. With any higher number, an 'Integer out of range' error would occur. To set a maximum size of 240 files, then, we would want to reduce the highest permitted value for n to 12, and this can be achieved by altering the DOS as follows:-

```
10 CLEAR 4e4
20 LOAD d1'+sys Beta' CODE 409
60
30 POKE 46415,9
40 SAVE d1'+sys Beta 'CODE 409
60, 6850
```

(From the point of view of BETAFIX, it makes no difference whether this modification is carried out before or after applying the latter).

To test afterwards, boot the amended DOS and try FORMAT d1,12 and this time, the command should be accepted, giving a disc of 240 file capacity if you proceed with the format.

Miles has also sent me a couple of interesting illustrations of this bug. If you print out the 'long' catalogue, for, say, 300 files, slot numbering goes wrong after the 255th file: the next one is not

numbered as file 256, but the sequence starts again and it's therefore numbered as file 0. The next is numbered file 1, a problem, for we've already had one of these a long way back, the next one 2, and so on up to 44. The short CAT fouls it up even better, since only the first 44 files are shown, the same as the number of out of sequence files at the end! So if you must have more than the standard number of files (and I would prefer not, personally), then Miles' POKEs are a must!

The second snippet Miles would like to bring to your attention also concerns formatting. This is a trick which should work with any DOS, provided that a DS/DD drive is being used. Although the maximum number of tracks is officially 160 (i.e. 0-79 and 128-207), in practice, an extra track can usually be squeezed into each side, opening up some intriguing possibilities. To create these extra tracks, enter POKE @1,210 (or POKE @2,210 for drive 2) and format the disc in the usual way. (Don't forget to POKE @1/2,208 again afterwards, or reboot).

The new tracks have interesting properties that could usefully be exploited by anyone wishing to expand on this idea: being isolated from and independent of normal DOS operations, they are unaffected by (normal) reformatting, etc. and to all intents and purposes are completely hidden from the DOS. Any data stored there therefore remains intact and can only be changed through SAVE @ (or erased by reformatting under a 210-track POKE). Disc copying programs, including sector copiers, also ignore the extra tracks, making it possible, for example, to distinguish an original disc from a 'clone'.

However, if you do wish to copy the new tracks from one disc to another, use (for BetaDOS) the following program

(remembering to format the destination disc appropriately beforehand).

```
10 CLEAR 29999
20 LOAD @1,80,1,30000,10: REM
Load track 80, disc 1
30 LOAD @1,208,1,40000,10: REM
Load track 208, disc 1
40 SAVE @2,80,1,30000,10: REM
Save track 80, disc 2
50 SAVE @2,208,1,40000,10: REM
Save track 208, disc 2
```

Or, for G+DOS:-

```
10 CLEAR 29999
20 REM Load track 80, drive 1
30 LET a=30000: FOR s=1 TO 10
40 LOAD @1,80,s,a
50 LET a=a+512: REM New address
s for next sector
60 NEXT a
70 REM Load track 208, drive 1
80 LET a=40000: FOR s=1 TO 10
90 LOAD @1,208,s,a
100 LET a=a+512: REM New address
s for next sector
110 NEXT s
120 REM Save track 80, drive 2
130 LET a=30000: FOR s=1 TO 10
140 SAVE @2,80,s,a
150 LET a=a+512: REM New address
s for next sector
160 NEXT s
170 REM Save track 208, drive 2
180 LET a=40000: FOR s=1 TO 10
190 SAVE @2,208,s,a
200 LET a=a+512: REM New address
s for next sector
210 NEXT s
```

The new tracks are numbered 80 and 208, and can be read/written accordingly, using the LOAD @ and SAVE @ commands. With BetaDOS, the multi-sector versions of these commands have the advantage of conveniently allowing the entire track to be loaded or saved in one operation, whereas with G+DOS, each sector has to be accessed individually.

Miles writes that he has tried this technique on dozens of discs and has yet to see it fail, though one extra track per

side does seem to be a hard and fast limit. This is a pity, as with four tracks instead of two, a means would then have existed to produce a duplicate copy of the directory, - the ideal precaution against a sector error there. Miles also sent me a Betados 300 file format disc with cat printouts to show the effect of the BDOS bug. He's also put an extra two tracks on the disc, where he's saved a screen. And this is where we come to a real Kinloch - a proper short spot!

To see the screen on the extra two tracks, boot the BetaDOS system file on the disc, and enter:-

```
10 LOAD @1,80,1,16384,10
20 LOAD @1,208,1,21504,4
```

Now, the interesting part. Reformat the disc, and run the above again, and the program will still be there! Do take care to do this in 48K mode, as a screen represents 13.5 sectors, and 14 sectors therefore need to be loaded, overwriting the printer buffer....

Many thanks, Miles.

Now over to Dean Shepherd of Bristol, who has already featured in last month's Short Spot. This month's bits, fortunately, are much shorter. The first one is called 'repairer', and it loads a faulty sector from disc, then resaves it immediately. This, so Dean writes, cures certain sector errors on Spectrum and SAM discs. Dean's favourite sector fault is, he says, DATA CRC, and he seems to get a lot of these. This program is very effective at restoring his discs. The bad news is that it cannot restore sector errors such as 'sector not found'. This is a real shame, and a nuisance, as he seems to be getting a lot of these lately, especially in tracks 0 and 2. Dean also, therefore, ends with the plea that he needs to know exactly what the mechanics of SAM/Spectrum disc data recovery are. In particular, Dean is

concerned with the exact nuts and bolts of the system; storing the contents of disc sectors. Well, Dean, all you do is load the sector into memory somewhere, then save that memory as a piece of code - SAVE "my25thsectr" CODE start, length. Then load another one - into the same location if you like - and save it. But I'm not sure how the defective byte is made good. Can anyone explain?

Here we are; here's 'repairer' - get typing!

```
5 BORDER 0: PAPER 0: PEN 0: C

```

Many thanks, Dean - and do please send some more.

And that is all for this month, I hope you have all found something to interest you.

Please keep all your snippets coming to me; remember, without them I can't put a column together. Please send them to:-

John Wase,  
Green Leys Cottage,  
Bishampton,  
Pershore,  
Worce,  
WR10 2LX.

See you next month.

# SNA LOADER

By:- James Gasson.

The Spectrum is alive and well on the internet. There are numerous Spectrum web pages, containing information and views, a few discussion groups, and several FTP sites, offering lots of programs legally, and plenty illegally too.

But many of the people who use these services don't actually have Spectrums! They may have Spectrum emulators for machines like the Acorn Archimedes, Apple Macintosh, or IBM PC. One such emulator, 'Z80' for the IBM PC, was reviewed in Format Vol.7 N°2, October 1993, in the article 'PC=Z80'.

Most of these emulators don't read Spectrum PLUS D discs directly, so they support a variety of alternative snapshot formats, 'SNA' being one of the more common.

There is already a program for the Spectrum that reads SNA format snapshots, it even reads them directly from IBM PC disc! (I found this on the internet - somewhere.) But I haven't yet seen a comparable program for SAM. (Actually, I have been talking on the internet to someone who has written such a program, but as I said, I haven't seen it yet. Anyway, it's more fun if you write it yourself!)

My program doesn't read IBM discs, so you'll have to copy the snapshots onto SAM disc first, with a utility like PC-Suite. The SNA loader also requires a copy of "snapt.bin" file - the NMI routine from the SAM DOS Spectrum emulator, and a copy of the Spectrum's ROM, which

should be called "rom.bin". You should find "snapt.bin" on your SAMDOS utility disc, and anyone who has used a commercial Spectrum emulator for SAM should know how to get a copy of the Spectrum ROM.

SNA format snapshots are code files that are 27 bytes longer than 48Kb. The first 27 bytes contain the registers, and the rest is the 48Kb memory dump. My program loads a SNA into memory beginning at 27 bytes below the start of the virtual Spectrum's RAM, so that the 48Kb dump ends up in the right place. That means the last 27 bytes of the Spectrum ROM are overwritten, but that doesn't seem to cause any problems.

Next, the registers are copied into the DOS page, so they can be used to restart the snapshot. In G+DOS on the Spectrum, the registers occupied the last 27 bytes of DOS RAM (I think), but different versions of SAMDOS and MasterDOS put them in different places (drat!).

I own SAMDOS 2.0 and MasterDOS 2.1, and have allowed for both, so I hope you all have one of those. It may work with other versions too, although I obviously can't check that! With the snapshot now properly loaded into memory, my program uses the SAM command 'CALL MODE 1' to start it.

Here is the program:-

## FORMAT

### SAM REPAIR SERVICE

We are pleased to be able to offer readers an official, West Coast approved, repair service for SAM Coupé and SAM élite computers and add-ons.

**PRICING** Because every fault is different we can't guarantee a fixed rate. When we receive your machine it will be tested and, if it is going to cost more than £35 for the repair then we will contact you for authority to continue.

Pack your machine well (we will use your parking for its return). Please phone us on 01452-412572 for advice on dispatch (we can even arrange UK Mainland collection and overnight delivery for an extra £12.95). In many cases we can also give an estimate over the phone. All repairs returned by overnight carrier so tell us which days there will be someone in to sign for the parcel. Please quote your INDUG membership number and give a evening contact phone number.

Send your machine to:-

**Format (SAM Repairs),**  
34, Bourton Rd, Gloucester, GL1 0LE.

OK, hands up all you who remember Beta Disk? I see, not many. Quite a few of you know about Opus and virtually everyone knows the PLUS D and the +3 but now I'm going to tell you what little I know of Beta Disk. Are you sitting comfortably? Then I'll begin.

I acquired mine by chance when I was buying a second-hand PLUS D last year, it got thrown in as an extra. There was no system disc, or manuals, BUT then I recalled another contact offering one for a fiver (suggesting it was outdated). I rang him up and asked if he had the manual, he said yes and also a few discs, so I bought it.

I tried it initially and managed to load a few games but was rather unimpressed, this month I gave it another whirl set up on a more permanent basis with a 48k+ so here's my verdict.

It is housed in a plastic case (rough dimensions 4" x 6" by 1 inch high). The 6 inch measurement is along the back of the Spectrum obscuring the power socket, you see the power socket goes into Beta Disk and the Spectrum is powered backwards through the edge connector.

I'm looking at a review from Crash Nov 85 so some of my facts and figures come from there. It can power up to 4 disc drives 3½" or 5¼", 80 or 40 track, single or double sided so no problems there.

It has a reset button, ideal if your computer is a rubber keyboard Spectrum. In many ways it is like the PLUS D, a

few advantages a few drawbacks.

1. Drawback - Only suits 48K machines (16K as well maybe)

2. Like the PLUS D it has a snapshot button for full 48K game saving but no SAVE SCREEN\$ facility.

3. Formatting is slow(ish), 35 seconds. The formatting is peculiar with sectors only being 256 bytes long, 16 sectors per track so an 80 track, double sided disc gives 640K of usable space. On the plus side a one line program would only use one sector (256 bytes) whereas the PLUS D would use one 512 byte sector and the +3 insists on using two 512 byte sectors for even the smallest program.

4. Overall speed of access is quite good, definitely a lot faster than +3 and not that far behind the PLUS D to really matter, the review of 1985 gave 2 seconds as the catalogue time.

5. It even supports Opentype files (yes I have used them extensively albeit in the past on the PLUS D)

6. Plus side - it doesn't have a printer interface but it does have a through port so you can fit the printer interface of your choice. At the moment I'm using the Tasman interface which is automatically supported by Tasword II.

Can I just put in a plug here, I have Tascopy for using the Tasman interface for screen copying but not having got the interface new the cassette driver is missing i.e. the software needed to LPRINT/LLIST from Basic, someone send me a copy PLEASE.

Apart from a printer interface the through port is useful for many other units, the AMX mouse worked OK (haven't tested Kempston). Interface 2 doesn't work and also the PLUS D won't although the Beta still functions, so that rules out copying between the systems direct (unless anyone knows of a Beta/PLUS D and PLUS D/Beta disc reader type program).

Now both my Beta Roms are version 4 but one is 4.11 and without booting it up I can't remember the other one but I seem to recall snapshots made by one ROM not loading on the other.

The manual I would imagine to anyone never having had a PLUS D would probably seem clear as mud. But, I've just about got the hang of it. The system came supplied as a version 3 manual, with a version 4 supplement (guaranteed to confuse). Version 3 implemented a password system for each disc (very wisely dropped on version 4). It would seem the snapshot button was only added with version 4.

To be quite honest Version 4 DOS seem far from finished off and it begs the question was there ever a version 5 to put right the gremlins in version 4.

OK. The DOS - Version 4 has Format "name" (name the disc), Erase, etc built into ROM although it's also supplied as a utility program. Catalogue gives a simple two column screen cat with 'C', 'B' showing file type and a number giving the sectors used. A full PLUS D style cat can be obtained from the utility disc. The Utility disc also offers 4 types of Formatting 40 or 80 track single or double sided, the ROM version does a check on the disc drive and formats accordingly which is quite clever.

Obviously having the DOS in ROM with no system file to 'boot' although

handy, makes for a system that can't be debugged like the PLUS D system file was many times in it's early years (and still being worked on no doubt)

The DOS BUGS - The manual tells you to use a single sided format disc for this, what I found was that the game etc was saved with no name, even after renaming the next snapshot overwrote it and again had no name. Well at least that's DOS 4.11 for you, I can't believe such a howler of an oversight on the programmers part. You get round it by saving each and every snapshot onto another disc with a filename then re-using the first disc for a new snapshot.

The catalogue shows the number of existing and deleted files, take no notice, that info has proved to be wrong time after time, e.g. delete two files then find only one file is shown as deleted although both file names have correctly gone.

There is a command called 'Move' which moves files around on the disc to retrieve wasted space caused by deleted files, I can't grumble here, it seems to work.

The DOS allows auto-run lines for basic, and auto run addresses for machine code, also similar to the PLUS D's 'autoload' file, any file named 'boot' will automatically load when the system is reset.

It takes a bit of getting used to the fact that the DOS is 'case' sensitive as well as file type sensitive so for example you could have "Tasword" (basic), "Tasword" (code) as well as all permutations of spelling of tasword using lower and upper case.

Another nail in it's coffin is the syntax, it doesn't use PLUS D, Opus, microdrive type syntax. Instead you call up DOS with Randomize USR 15360 and then use normal tape type syntax load save etc

plus erase format and cat. Loads and saves within a basic program take the form:-

```
RANDOMIZE USR 15363; REM : LOAD
"NAME"
```

This means software that had a microdrive file option in machine code will never fully convert.

Finally the utility disc offers a tape to disc utility, by God you're going to need this since no one to my knowledge (at least in this country) supported it.

To Sum Up - I've used, but wasn't too keen on, Opus (and that got some support). In spite of the gremlins I think I could get fond of Beta if I didn't already have PLUS D and +3. Offers of, or requests for, HELP usual address:-

## SMALL ADS

**FOR DISPOSAL** Space needed. For agreed MINI-prices. Spectrum plus with manual, power supply and Start adaptor, D-m printer, manual, leads and spare ribbons. Tape recorder(s). Some books. About 40 tapes, one or two games, utilities. Can provide small b/w TV if required. Collect from Chalfont St. Giles, Bucks. Ring John on 01494 872928.

**SPECTRUM BOOKS** Nine assorted Spectrum books for sale. Ring me for specific needs, or you can have them all for £18 including p&p. Phone Alan Cox on 01994 231112.

### YOUR ADVERTS

Selling, Buying, Pen Friends, etc.

Any PRIVATE advert, subject to acceptance, will be printed FREE in the next available issue. Any software sold MUST be original. The publishers will not be held, in any way, responsible for the adverts in this column.

Due to shortage of space, if your advert remains unpublished after two months then please send it in again. Trade advertisers contact the publisher for rates.

Please note: Adverts now run in both **FORMAT** and **FORMAT PC** to give you twice the market.

"You know, in my younger day we just used to take a magazine in..."

# SAM elite 512

The advanced computer that retains a user friendly appeal which makes even the beginner feel right at home. An easy to learn Basic and disc operating system (no messing with slow tapes here) will allow you to do things you never thought possible before. Your SAM comes with a very easy to read manual and everything you need to get started - it even has some pretty impressive demo software for you to run, just to give you a few ideas for starters. If you already own a Spectrum then this is the machine for you because you don't have to throw away all you have learnt so far - just be prepared to be amazed at the extra power and features.

POWER AT A PRICE YOU CAN AFFORD...

## FEATURES INCLUDE

- 512K RAM
  - 32K ROM
  - 800K Floppy Disc Drive
  - 6 Channel Stereon Sound (mono through TV)
  - Z80B 6Mhz Processor
  - Centronics Printer Port
  - Joystick Port
  - MIDI & Networking
  - 128 Colours
  - 4 Screen Modes
  - SCART Output (for Monitor or TV)
- Plus LOTS More....

ONLY £199<sup>95</sup>

Includes 1 year return to base warranty on full computer PLUS extended 2nd year warranty on main board.

## Reconditioned SAM Coupé

We are able to supply a small number of professionally reconditioned SAM Coupé computers. These have been fitted with a modern style disc drive, a version 3 ROM, new keyboard unit, and are supplied with new manuals and DOS system disc. They carry a full 90 day full return to base warranty. Because these are reconditioned machines there may be slight blemishes to case or base.

Has All The Features Of The SAM Elite. Except That There Is No Built-in Printer Port On The Coupé (see the SPI, under interfaces below)

ONLY £149<sup>95</sup>

## SAM Coupé Replacement Disc Drives

The original slot-in slim-line drives produced for the SAM Coupé are no longer made. If your existing drive is now showing signs of terminal decline perhaps it is time you gave your SAM a new lease of life by fitting a modern style IPC type floppy drive.

In most cases we find the faults with old drives are mechanical (due to worn heads, stepper motor failure, etc.) In these cases you need an internal interface Type 1 to which you transfer the 1772 disc controller chip from your old drive - thus making the upgrade as cheap as possible.

If you want to fit a second drive for first drive, if you don't have one or the 1772 on your old drive is faulty then order a Type 2.

Both types are available in either kit form or ready assembled. For the kit you will need screwdriver, soldering iron, solder and a reasonable level of soldering skills. All you need for the assembled version is a screwdriver. Full fitting instructions are given and the only other thing you need is a standard PC type disc drive from your local supplier (cost about £20 to £25).

If you have any doubts about which type of interface you need, or any questions about the drive fitting in general, then please give the **FORMAT** hotline a ring on 01452-412572 and they will be pleased to help you.

Kit Form | Assembled

Internal Disc Interface Type 1 (without 1772)	£19.95	£29.95
Internal Disc Interface Type 2 (including 1772)	£29.95	£39.95

## INTERFACES

These interfaces work with both the SAM elite and the SAM Coupé unless otherwise stated.

**SAM MOUSE SYSTEM** Interface, High Quality Mouse and the Software to drive it. The interface plugs into the mouse port on the back of SAM so you don't need a spare expansion socket. More and more software now works better if you use a mouse. **Only £39.95**

**SAM PRINTER INTERFACE** The SPI (Coupé only) allows connection to any standard parallel printer. Allows standard LPRINT, LLIST & DUMP commands to work on compatible printers. Plugs straight into the expansion port. Requires IBM type 26 way ribbon printer cable (see below). **Only £24.95**

**TWOUP** Allows two interfaces to be connected to SAM's expansion port at same time. **Only £19.95**

**KDI** The eXternal Disc Interface. Allows external 3 1/2" or 5 1/4" drive to be connected to SAM Coupé. Also includes Parallel Printer Interface. **Only £44.95**

**ALSO AVAILABLE:** Printer Cable - £7.95, SCART Cable - £7.95, Replacement Keyboard £14.95, Replacement Power Supply - please ring. Plus spare parts service - tell us what you want and we will give you a price..

Send Your Orders To:-

West Coast Mail Order,  
c/o Formal Publications,  
34, Bourton Road,  
Gloucester,  
GL4 0LE.

**West Coast Computers**

Ordering: Write your order clearly, state your name, full address and phone number and if possible please quote your INDLG number as this will help to speed orders. Payment: Cheques and UK Postal Orders should be made payable to **FORMAT PUBLICATIONS**. Overseas customers may also pay using **FORMAT's** foreign exchange scheme. Postage & Packing: Prices include UK p.p. Overseas customers please write for a quote. Prices valid for 90 days from date of publication. T.&C.F.

# YOUR LETTERS

Dear Editor,

Following the letter from Lance St. Cyr in December's **FORMAT**, I would like to add the following points:-

DS/DD 3 1/4" discs are becoming increasingly rare - it cannot be too much longer before they go the way of the old 3" discs and disappear altogether. For the most part DS/HD will do as a substitute; if a piece of matt black insulation tape is placed over the bottom right hand window, it will ensure the disc is read by both a mechanical and infra red detectors as a DS/DD disc.

The only problem I foresee is that the magnetic strength recorded may not be as strong, especially if the disc is for long term storage; making a second copy would help overcome this.

My best wishes to yourself and Jenny.

*Yours sincerely, M.R.Pritchard.*

It is true that many shops are now only stocking High Density (HD) discs as these are the ones used by most PC users. However, I would be very surprised if Double Density (DD) discs became as rare as 3" have.

I agree that, at a pinch, you can get away with using HD discs, but I would recommend DD discs for all long-term storage.

What are other readers finding? Do we need to start offering DD discs through **FORMAT** as a service? Write in and let us know. *Ed.*

Dear Editor,

I am appealing to the top in the hope that you will be able to give the current position in respect of the supply of the

SAM clock. Apart from a note in **FORMAT** some months ago that there had been problems with the board the clock seems to be in limbo. Yet it is advertised in **FORMAT** each month!

Having had my grouse please accept my sympathy in respect of the recent personal problems suffered by several members of your team.

*Yours sincerely, J.E.Flatman.*

News of the SAM\_Clock should be in this months Editorial Mr Flatman, I doubt if anyone will believe the problems that there have been getting this into production, but it is going well now.

And thanks for your kind comments. *Ed.*

Dear Editor,

I wish to renew my subscription to **FORMAT** for a further twelve months. From the renewal notice am I correct in assuming I can claim a 30% reduction (£6.00) leaving £14 to pay.

I don't understand the example cited in the renewal notice, which quotes £24.50 for a two year subscription which is almost 38%.

I have enclosed a cheque for £14 assuming I have interpreted this correctly.

It is unfortunate that the increased subscription charges have coincided with a reduction in the number of pages of **FORMAT** from 40 pages down to 24 or 28.

As to the question what 3 articles have you most enjoyed. I can only repeat, most of them. Particularly Short Spot, Help Page and the Letters page.

Instead of asking members what 3 articles they least enjoyed, why not pose the question 'What do you use your SAM for?'

I'm sure that amongst the thousands of members who own SAM's, a good proportion must have a serious application for them. I just cannot believe that they are all doing spirographs, games and catalogue programs etc.

It might even produce ideas for future issues.

Keep up the good work, and congratulations to Jenny on her Millennium Files contribution.

*Yours sincerely, Ken Powley.*

Right Ken, there is a rate for one year (£20) and a lower rate for two years (£36). Members using the first renewal notice are offered a 30% discount on either of these figures, giving £14 for one year (only £2 on the old rate) or £25.20 for two years, yes - I got it wrong when I type set the renewal notice. Still, not to worry, I'm not going to fall out with people over a few pence.

What pays for a lot of **FORMAT** is advertising. The original plan (way back in 1987) was for a 16 page issue with any extra being paid for by adverts. Sadly a lot of people seem to be pulling in their horns and cutting back on the advertising, which as any expert will tell you is the wrong way to go. We buffered the drop in advertising for a couple of years but in the end the page count had to drop a little - still, we do pack more in than anyone else could.

In the latest **FORMAT PC** we are advertising for someone to sell advertising space in both magazines for us, and we are hoping this will allow us to inflate again in the near future. *Ed.*

Dear Editor,

Can you please send me a sound chip (Philips SAA 1099) for which I enclose a cheque to the value of £10.95.

Could you also pass on some info for

your readers who have the PCG DTP pack and can't get the number 2 drive to work. In the AUTOWORD loader, change line 15 to 18. Add new line 15 (to read) LET dk=PEEK 96115: IF dk>0 THEN DEVICE d0+dk: GOTO 18.

Add new line 16 (to read) DEVICE T  
Change line 50 (to read) DIR dk:  
PRINT: GOTO 10.

*Yours sincerely, Roy Burford.*

Thanks for the tip Roy, hope you got on ok with fitting the sound chip. *Ed.*

Dear Editor,

In answer to the questionnaire that comes with the renewal notice. I enjoy all Spectrum articles and letters and of course the editorial, although SAM articles are of minor interest to me. All my copies of **FORMAT** are filed and what was not relevant one year may be vital another. So I value everything you publish. Keep up the good work.

In future, can anyone shed light on getting the best from the DTP package especially using TAB 2 files in it to get hi-res fonts.

*Yours sincerely, Ralph Moore.*

I seem to remember something in the past on converting Tasword 2 files to Wordmaster format, but it is another of those things that I cannot put my hands on just at the moment.

Tasword 2 stores text as 64 character lines, without any 'End Of Line' marker. Wordmaster, if I remember correctly, uses a carriage return (CHR\$13) to mark the end of a paragraph. It handles ends of lines at print/display time. Anyone care to give more help to Ralph? *Ed.*

Letters may be shortened or edited to fit on these pages although we try to edit as little as possible.

This is YOUR letters page so it is up to you to fill it with interesting things. Come on, get writing, any subject even remotely related to computers. Just keep things as short as you can so we can fit in as many as possible each month. Please write clearly or type your letters. Send them to the address on page 3 or email them to us at [Formatpub@aol.com](mailto:Formatpub@aol.com).

## SOFTWARE

### SAM Coupé Software On 3 1/2" Disc

**PCG's DTP PACK.** The famous package including WordMaster, TypeLiner & HeadLiner. Complete on disc for SAM. Includes 2 extra font packs bringing the total value to £53.40.

Order Code: SCD-04 Price: £24.95

**COLOUR DUMP.** Screen dump software to work with Epson compatible colour printers. RRP £12.95

Order Code: SCD-05 Price: £7.95

**MasterDOS.** The advanced Disc Operating System for SAM. Includes random access files, sub-directories and lots more.

Order Code: SCD-31 Price: £15.95

**MasterBASIC.** Extended Basic for SAM, works with either MasterDOS or SAMDOS.

Order Code: SCD-32 Price: £15.95

Order Both MasterDOS & BASIC Together and SAVE £5.

### SAMSPEC SOFTWARE

SAM + Spectrum versions on one disc (5 1/4 or 3 1/2)

**FONT LIBRARY.** 100 screen fonts plus support software, easy to use on either computer. (Special 3" disc available - Spectrum files only). RRP £9.95

Order Code: SSD-01 Price: £5.95

**MONEY MANAGER.** Advanced personal budgeting system for both machines. Spectrum version needs 128K+2 (not +2a or +3). RRP £15.95

Order Code: SSD-02 Price: £9.95

### SPECTRUM SOFTWARE

Unless otherwise indicated these are DISCIPLE/PLUS D programs. Please state 3 1/2" or 5 1/4" disc (80 track only) on order.

**ARTIST 2.** The best art package ever written for the Spectrum. 48K and 128K versions on the same disc. With page-maker and utility software. Full manual. RRP £19.95

Order Code: SPD-01 Price: £12.95

**UTILITY DISC #1.** Six of the best and most useful disc utilities for DISCIPLE or PLUS D. Added bonus program - not to be missed. RRP £9.95

Order Code: SPD-02 Price: £6.95

**PCG's DTP PACK.** The famous package including WordMaster, TypeLiner & HeadLiner. Includes 2 extra font packs bringing the total pack value to £53.40.

Order Code: SPD-04 Price: £24.95

+3 Version: SPD-04C Price: £29.95

**MUSIC MAESTRO.** Write music either just for fun or to include in your own games. Full manual, lots of demo tunes. The ideal way to write music on the Spectrum RRP £9.95

Order Code: SPD-05 Price: £7.95

+3 version: SPD-05C Price: £9.95

# FORMAT

## READERS SERVICES

### FORMAT BACK-ISSUES

Volumes 1, 2 and 3 are now out of print. Volumes 4,5,6,7 and volume 8 are available as complete volumes. Order by giving the Volume N° (i.e. V5).

Price: £14.00 per volume.

All issues, from Volume 8 N° 1 (September 1994) to the latest issue, are available separately. To order just quote the Volume and Issue N°.

Price: £1.75 each, (5 or more £1.50 per copy).

### HARDWARE

**DUC LEAD.** For use with DISCIPLE or PLUS D. This 'Dualing Up Cable' allows two disc drives to be attached without the need for opening one drive to alter its ID. Allows you to switch drives to even out wear without opening cases. RRP £16.95

Order Code: DUC-01 Price: £11.95

**PRINTER LEAD.** Top quality parallel printer lead (BBC standard). 1 1/2 metres long (approx). For use with DISCIPLE, PLUS D or SAM. RRP £10.95

Order Code: PPL-01 Price: £7.95

+3 PRINTER LEAD. For +3 or +2a. RRP £12.95

Order Code: PPL-02 Price: £9.95

**SAM COUPÉ TECHNICAL MANUAL Version 3.** The real inside info on SAM. No SAM is complete without one. RRP £16.95

Order Code: STM-01 Price: £12.95

### SAM CLOCK

The SAM\_CLOCK is fully compatible with the TIME and DATE functions of MasterDOS and has an integral battery that keeps the board functioning when your SAM is switched off. The board fits onto the expansion connector at the back of SAM but comes with a built-in through-connector so you don't need a Two-Up to use it in conjunction with another interface. R.R.P. £29.95

Order Code: SCH-01 Price: £24.95

**ORDERING** All prices include UK p&p, overseas readers please add 10% to for extra postage.
